
Problems with \"New Templates\"

Posted by trini_ali - 2008/11/11 15:55

Hi,

I added the recent templates (i.e the fullscreen_swf, commentary upgrade and timeline) to my pachy but they don't work. The root screen loads when I try to view but nothing else.

In trying to figure out what was wrong I noticed that all my working templates have the subversion (.svn) directory in their template package while these new ones don't.

Does this have anything to do with my problem or am I way off?

thanks much,
Trini
